Compact, amplifier built-in type with Universal voltage

Features

- Small and power supply built-in type
- Easy installation with LED indicators on product
- Enables to set the operation mode by VR (Light ON/Dark ON)
- Status and output LED indication
- Built-in IC photo diode for ambient light and electrical noise

Specifications

• Free power, Relay contact output type

Noise resistance ±1,000V the square wave noise(pulse width : 1μs) by the noise simulator Dielectric strength 1000VAC 50/60Hz for 1minute Vibration Mechanical 1.5mm amplitude or 300m/s² at frequency of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for Malfunction 1.5mm amplitude or 300m/s² at frequency of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for the property of 10 to 55Hz(for 1 min.) in each of X, Y, Z directions for X, Y, Z direction

Amplifier Built-in type with Universal voltage

Mounting and sensitivity adjustment

Through-beam type

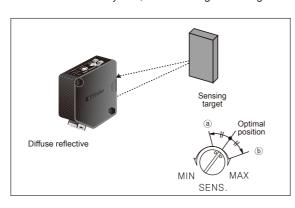

- Supply the power to the photoelectric sensor, after setting the emitter and the receiver facing each other.
- Set the receiver in center of position in the middle of the stability range of indicator adjusting the receiver or the emitter right and left, up and down.
- 3. After adjustment, check the stability of operation putting the object at the optical axis.
- ※If the sensing target is translucent body or smaller than ø16mm, it can be missed by sensor cause light penetrate it.

O Diffuse reflective type

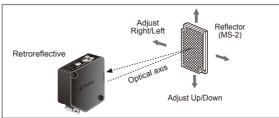

- 1. The sensitivity should be adjusted depending on a sensing target or mounting place.
- Set the target at a position to be detected by the beam, then turn the adjustment VR until position (a) where the operation indicator turns ON from min. position of the adjustment VR.
- Take the target out of the sensing area, then turn the adjustment VR until position

 where the the operation indicator turns ON. If the indicator dose not turn ON, max. position is
- 4. Set the adjustment VR at the center of two switching position (a), (b).
- *The sensing distance indicated on specification chart is for 100×100mm of non-glossy white paper. Be sure that it can be different by size, surface and gloss of target.

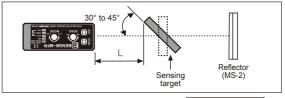

Retroreflective type

- Supply the power to the photoelectric sensor, after setting the photoelectric sensor and the reflector(MS-2) in face to face.
- Set the photoelectric sensor in the position which indicator turns on, as adjusting the reflector or the sensor right and left, up and down.
- 3. Fix both units tightly after checking that the unit detects the target.

※If using more than 2 photoelectric sensors in parallel, the space between them should be more than 30cm.

- ※If reflectance of target is higher than non-glossy white paper, it might cause malfunction by reflection from the target when the target is near to photoelectric sensor. Therefore put enough space between the target and the photoelectric sensor or the surface of the target should be installed at angle of 30° to 45° against optical axis. (When a sensing target with high reflectance near by, photoelectric sensing with the polarizing filter should be used.)
- XSensitivity adjustment: Refer to the diffuse reflective type's.

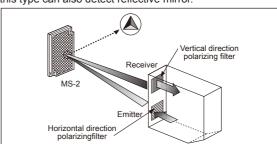

XIf the mounting place is too narrow, please use MS-4 instead of MS-2.

Retroreflective type with polarizing filter

The light passed through the polarizing filter of the emitter reaches to the MS-2 reflector converting as horizontal direction. It reaches to the receiver element of polarizing filter converting as vertical by the MS-2 reflector. Therefore, this type can also detect reflective mirror.
